Sharpe Ratio is a measure of the return of an investment compared to its risk. Generally, the greater the value of the Sharpe ratio, the more attractive the risk-adjusted return.

Market cycle refers to the movement from a time period of strong market performance (bull), to a period of weak performance (bear) and then back to a bull market.

Commissions, trailing commissions, management fees and expenses may all be associated with mutual fund investments. The indicated rates of return are the historical annual compounded total returns, including changes in security values and reinvestment of all distributions, and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any securityholder, which would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated. Please read the prospectus before investing. Copies are available from Invesco Canada Ltd.

Series F is available only to eligible investors who have fee-based accounts with their Dealer and whose Dealer has signed an Invesco Series F Dealer agreement with Invesco Canada. Sales charges and trailing commissions are not payable for Series F units/shares; however investors may pay other fees to their Dealer for investment advice and other services. Other series' performance and star ratings will differ due to fees and expenses.

Quartile rankings are comparisons of the performance of a fund to other funds in a particular category and are subject to change monthly. The quartiles divide the data into four equal segments expressed in terms of rank (1, 2, 3, 4). Quartile rankings are determined by Morningstar Research Inc., an independent research firm. An investment cannot be made in an index. Diversification does not guarantee a profit or eliminate the risk of loss. Past performance is not a guarantee of future results.
